Arca

Oskar:

I set up early infrastructure and tooling by adding Prettier pre-commit hooks and Docker configuration for both dev and prod environments. Then I added the spending analytics page and restructured the app navigation, making Budget the home page and moving Analytics to the end of the nav. Then I worked on a core feature: adding category targets and monthly assignments for each category. Then I also added an E2E test for the frontend using Playwright.

- 2026-10-04 (`58c6cd5`): chore: add prettier pre-commit hooks and setup readme (#4)
- 2026-10-05 (`875c203`): chore: add docker setup for dev and prod (#5)

- 2026-10-19 (`1cd0af6`): feat: add DELETE /users/:id route to delete own account (#46)
- 2026-10-19 (`c5266d2`): test: add Playwright e2e tests for frontend (#48)
- 2026-10-19 (`c2806b5`): chore: readme cleanup and license (#50)

Rami:

Architecture: Setup the backend and introduced the Repository Pattern and built primary API endpoints (Plans, Categories, Transactions, Overview …etc).

Testing & Quality: Created full integration test suites (Vitest) and configured SonarCloud SAST/coverage gates.

DevOps / CI/CD: Built GitHub Actions workflows for Docker containerization (GHCR) and frontend deployment (GitHub Pages).

Full-Stack Integration: Connected frontend-backend auth flow and configured Drizzle database migrations.

- 2026-09-23 (6002ee2): feat: Init the project
- 2026-10-04 (f1c098f): feat: Make database schema

Kimmy:

I've mostly been working on the transactions side of Arca. I started with the Transactions page, where you can log expenses and see the month's list, search it, filter it and delete things. After that I added tags, so you can label transactions with colours and filter by them. That part touched everything: new database tables, new endpoints, validation and tests.

My biggest piece is monthly payments. You tick "Repeat monthly" when you log an expense, and the app creates it again every month on its own. It was trickier than it sounds, since short months, leap years, missed months and deleting just one month all needed thinking through. Other than that I have been working a lot with the general frontend and flows of the app visually.

- 2026-10-11 (93fea2d): feat: transactions page against the token backend
- 2026-10-11 (362655f): fix: feedback, add money in/out toggle,3 small backend fixes
- 2026-10-15 (6a07c66): feat: tags for transactions
- 2026-10-15 (0bdd4f0): fix: register the tags route

- 2026-10-18 (d507977): feat: monthly payments backend
- 2026-10-18 (9f536c1): feat: monthly payments frontend
- 2026-10-18 (ca712ba): fix: sonar coverage and code smells for monthly payments
- 2026-10-18 (e02f6db): chore: remove font-mono
- 2026-10-18 (27ad6e3): feat: category stripes, tinted cards and card icons on the transactions page
- 2026-10-18 (991ab56): fix: backdated monthly payments, atomic stop, Swedish time and visible repeat switch

John:

I set up the Next.js frontend, created the first pages and sidebar. I created the login, registration, budget, savings goals, and onboarding pages. I also helped build the budget-plan backend and created the sidebar plan picker, and built shared UI components used across the app. Along the way, I contributed to styling, mobile sidebar fixes, and backend refactoring.
